

## 7. ABOUT THE AUTHOR

Cooper Dalrymple is a web developer from Pensacola, Florida who tinkers with embedded devices, vintage computing and music production. After fiddling around with the Commodore 64, Nintendo Entertainment System, and Nintendo Game Boy platforms, he landed on the Atari 2600 to join the hunt to chase the beam.

After rigorously learning how to program in 6502 assembly and grasp most aspects of the VCS architecture in 2019, he completed the first prototype of Spider Web in 2020. After community feedback and being featured on the ZeroPage Homebrew channel, final updates were made to the game in 2022 before manufacturing the cartridge that you now own.

Since the release of this game, Cooper has released "Diver" for the Pico-8 fantasy console and now goes under the name "ReLiC" for his video, electronics and music projects. Lately, he has

been developing an open source digital synthesizer hardware and software platform called "pico\_synth\_sandbox" using the Raspberry Pi Pico.

If you would like to learn more about Cooper and his latest projects, visit his blog at [dcdalrymple.com](http://dcdalrymple.com).
